

## PROOFS IN MATHEMATICS

❖ *Proofs are to Mathematics what calligraphy is to poetry.  
Mathematical works do consist of proofs just as  
poems do consist of characters.*  
— VLADIMIR ARNOLD ❖

### A.1.1 Introduction

In Classes IX, X and XI, we have learnt about the concepts of a statement, compound statement, negation, converse and contrapositive of a statement; axioms, conjectures, theorems and deductive reasoning.

Here, we will discuss various methods of proving mathematical propositions.

### A.1.2 What is a Proof?

Proof of a mathematical statement consists of sequence of statements, each statement being justified with a definition or an axiom or a proposition that is previously established by the method of deduction using only the allowed logical rules.

Thus, each proof is a chain of deductive arguments each of which has its premises and conclusions. Many a times, we prove a proposition directly from what is given in the proposition. But some times it is easier to prove an equivalent proposition rather than proving the proposition itself. This leads to, two ways of proving a proposition directly or indirectly and the proofs obtained are called direct proof and indirect proof and further each has three different ways of proving which is discussed below.

**Direct Proof** It is the proof of a proposition in which we directly start the proof with what is given in the proposition.

- (i) **Straight forward approach** It is a chain of arguments which leads directly from what is given or assumed, with the help of axioms, definitions or already proved theorems, to what is to be proved using rules of logic.

Consider the following example:

**Example 1** Show that if  $x^2 - 5x + 6 = 0$ , then  $x = 3$  or  $x = 2$ .

**Solution**  $x^2 - 5x + 6 = 0$  (given)

$\Rightarrow (x - 3)(x - 2) = 0$  (replacing an expression by an equal/equivalent expression)  
 $\Rightarrow x - 3 = 0$  or  $x - 2 = 0$  (from the established theorem  $ab = 0 \Rightarrow$  either  $a = 0$  or  $b = 0$ , for  $a, b$  in  $\mathbf{R}$ )  
 $\Rightarrow x - 3 + 3 = 0 + 3$  or  $x - 2 + 2 = 0 + 2$  (adding equal quantities on either side of the equation does not alter the nature of the equation)  
 $\Rightarrow x + 0 = 3$  or  $x + 0 = 2$  (using the identity property of integers under addition)  
 $\Rightarrow x = 3$  or  $x = 2$  (using the identity property of integers under addition)  
 Hence,  $x^2 - 5x + 6 = 0$  implies  $x = 3$  or  $x = 2$ .

**Explanation** Let  $p$  be the given statement “ $x^2 - 5x + 6 = 0$ ” and  $q$  be the conclusion statement “ $x = 3$  or  $x = 2$ ”.

From the statement  $p$ , we deduced the statement  $r$ : “ $(x - 3)(x - 2) = 0$ ” by replacing the expression  $x^2 - 5x + 6$  in the statement  $p$  by another expression  $(x - 3)(x - 2)$  which is equal to  $x^2 - 5x + 6$ .

There arise two questions:

- How does the expression  $(x - 3)(x - 2)$  is equal to the expression  $x^2 - 5x + 6$ ?
- How can we replace an expression with another expression which is equal to the former?

The first one is proved in earlier classes by factorization, i.e.,

$$x^2 - 5x + 6 = x^2 - 3x - 2x + 6 = x(x - 3) - 2(x - 3) = (x - 3)(x - 2).$$

The second one is by valid form of argumentation (rules of logic)

Next this statement  $r$  becomes premises or given and deduce the statement  $s$  “ $x - 3 = 0$  or  $x - 2 = 0$ ” and the reasons are given in the brackets.

This process continues till we reach the conclusion.

The symbolic equivalent of the argument is to prove by deduction that  $p \Rightarrow q$  is true.

Starting with  $p$ , we deduce  $p \Rightarrow r \Rightarrow s \Rightarrow \dots \Rightarrow q$ . This implies that “ $p \Rightarrow q$ ” is true.

**Example 2** Prove that the function  $f: \mathbf{R} \rightarrow \mathbf{R}$

defined by  $f(x) = 2x + 5$  is one-one.

**Solution** Note that a function  $f$  is one-one if

$$f(x_1) = f(x_2) \Rightarrow x_1 = x_2 \text{ (definition of one-one function)}$$

Now, given that

$$f(x_1) = f(x_2), \text{ i.e., } 2x_1 + 5 = 2x_2 + 5$$

$\Rightarrow$

$$2x_1 + 5 - 5 = 2x_2 + 5 - 5 \text{ (adding the same quantity on both sides)}$$

$$\begin{aligned}
 &\Rightarrow 2x_1 + 0 = 2x_2 + 0 \\
 &\Rightarrow 2x_1 = 2x_2 \text{ (using additive identity of real number)} \\
 &\Rightarrow \frac{2}{2} x_1 = \frac{2}{2} x_2 \text{ (dividing by the same non zero quantity)} \\
 &\Rightarrow x_1 = x_2
 \end{aligned}$$

Hence, the given function is one-one.

## (ii) Mathematical Induction

Mathematical induction, is a strategy, of proving a proposition which is deductive in nature. The whole basis of proof of this method depends on the following axiom:

For a given subset  $S$  of  $\mathbf{N}$ , if

- (i) the natural number  $1 \in S$  and
- (ii) the natural number  $k + 1 \in S$  whenever  $k \in S$ , then  $S = \mathbf{N}$ .

According to the principle of mathematical induction, if a statement “ $S(n)$  is true for  $n = 1$ ” (or for some starting point  $j$ ), and if “ $S(n)$  is true for  $n = k$ ” implies that “ $S(n)$  is true for  $n = k + 1$ ” (whatever integer  $k \geq j$  may be), then the statement is true for any positive integer  $n$ , for all  $n \geq j$ .

We now consider some examples.

**Example 3** Show that if

$$A = \begin{bmatrix} \cos \theta & \sin \theta \\ -\sin \theta & \cos \theta \end{bmatrix}, \text{ then } A^n = \begin{bmatrix} \cos n \theta & \sin n \theta \\ -\sin n \theta & \cos n \theta \end{bmatrix}$$

**Solution** We have

$$P(n) : A^n = \begin{bmatrix} \cos n \theta & \sin n \theta \\ -\sin n \theta & \cos n \theta \end{bmatrix}$$

We note that

$$P(1) : A^1 = \begin{bmatrix} \cos \theta & \sin \theta \\ -\sin \theta & \cos \theta \end{bmatrix}$$

Therefore,  $P(1)$  is true.

Assume that  $P(k)$  is true, i.e.,

$$P(k) : A^k = \begin{bmatrix} \cos k \theta & \sin k \theta \\ -\sin k \theta & \cos k \theta \end{bmatrix}$$

We want to prove that  $P(k+1)$  is true whenever  $P(k)$  is true, i.e.,

$$P(k+1) : A^{k+1} = \begin{bmatrix} \cos(k+1)\theta & \sin(k+1)\theta \\ -\sin(k+1)\theta & \cos(k+1)\theta \end{bmatrix}$$

Now

$$A^{k+1} = A^k \cdot A$$

Since  $P(k)$  is true, we have

$$\begin{aligned} A^{k+1} &= \begin{bmatrix} \cos k\theta & \sin k\theta \\ -\sin k\theta & \cos k\theta \end{bmatrix} \begin{bmatrix} \cos \theta & \sin \theta \\ -\sin \theta & \cos \theta \end{bmatrix} \\ &= \begin{bmatrix} \cos k\theta \cos \theta - \sin k\theta \sin \theta & \cos k\theta \sin \theta + \sin k\theta \cos \theta \\ -\sin k\theta \cos \theta - \cos k\theta \sin \theta & -\sin k\theta \sin \theta + \cos k\theta \cos \theta \end{bmatrix} \\ &\quad \text{(by matrix multiplication)} \\ &= \begin{bmatrix} \cos(k+1)\theta & \sin(k+1)\theta \\ -\sin(k+1)\theta & \cos(k+1)\theta \end{bmatrix} \end{aligned}$$

Thus,  $P(k+1)$  is true whenever  $P(k)$  is true.

Hence,  $P(n)$  is true for all  $n \geq 1$  (by the principle of mathematical induction).

### (iii) Proof by cases or by exhaustion

This method of proving a statement  $p \Rightarrow q$  is possible only when  $p$  can be split into several cases,  $r, s, t$  (say) so that  $p = r \vee s \vee t$  (where “ $\vee$ ” is the symbol for “OR”).

If the conditionals

$$r \Rightarrow q;$$

$$s \Rightarrow q;$$

and

$$t \Rightarrow q$$

are proved, then  $(r \vee s \vee t) \Rightarrow q$ , is proved and so  $p \Rightarrow q$  is proved.

The method consists of examining every possible case of the hypothesis. It is practically convenient only when the number of possible cases are few.

**Example 4** Show that in any triangle ABC,

$$a = b \cos C + c \cos B$$

**Solution** Let  $p$  be the statement “ABC is any triangle” and  $q$  be the statement “ $a = b \cos C + c \cos B$ ”

Let ABC be a triangle. From A draw AD a perpendicular to BC (BC produced if necessary).

As we know that any triangle has to be either acute or obtuse or right angled, we can split  $p$  into three statements  $r, s$  and  $t$ , where

$r$  :  $\triangle ABC$  is an acute angled triangle with  $\angle C$  is acute.

$s$  :  $\triangle ABC$  is an obtuse angled triangle with  $\angle C$  is obtuse.

$t$  :  $\triangle ABC$  is a right angled triangle with  $\angle C$  is right angle.

Hence, we prove the theorem by three cases.

**Case (i)** When  $\angle C$  is acute (Fig. A1.1).

From the right angled triangle  $ADB$ ,

$$\frac{BD}{AB} = \cos B$$

i.e.

$$\begin{aligned} BD &= AB \cos B \\ &= c \cos B \end{aligned}$$

From the right angled triangle  $ADC$ ,

$$\frac{CD}{AC} = \cos C$$

i.e.

$$\begin{aligned} CD &= AC \cos C \\ &= b \cos C \end{aligned}$$

Now

$$\begin{aligned} a &= BD + CD \\ &= c \cos B + b \cos C \end{aligned} \quad \dots (1)$$

**Case (ii)** When  $\angle C$  is obtuse (Fig A1.2).

From the right angled triangle  $ADB$ ,

$$\frac{BD}{AB} = \cos B$$

i.e.

$$\begin{aligned} BD &= AB \cos B \\ &= c \cos B \end{aligned}$$

From the right angled triangle  $ADC$ ,

$$\begin{aligned} \frac{CD}{AC} &= \cos \angle ACD \\ &= \cos (180^\circ - C) \\ &= -\cos C \\ \text{i.e. } CD &= -AC \cos C \\ &= -b \cos C \end{aligned}$$

Fig A1.1

Fig A1.2

Now

$$a = BC = BD - CD$$

i.e.

$$a = c \cos B - (-b \cos C)$$

$$a = c \cos B + b \cos C \quad \dots (2)$$

**Case (iii)** When  $\angle C$  is a right angle (Fig A1.3).

From the right angled triangle ACB,

$$\frac{BC}{AB} = \cos B$$

i.e.

$$BC = AB \cos B$$

$$a = c \cos B,$$

and

$$b \cos C = b \cos 90^\circ = 0.$$

Thus, we may write

$$a = 0 + c \cos B$$

$$= b \cos C + c \cos B \quad \dots (3)$$

From (1), (2) and (3). We assert that for any triangle ABC,

$$a = b \cos C + c \cos B$$

By case (i),  $r \Rightarrow q$  is proved.

By case (ii),  $s \Rightarrow q$  is proved.

By case (iii),  $t \Rightarrow q$  is proved.

Hence, from the proof by cases,  $(r \vee s \vee t) \Rightarrow q$  is proved, i.e.,  $p \Rightarrow q$  is proved.

**Indirect Proof** Instead of proving the given proposition directly, we establish the proof of the proposition through proving a proposition which is equivalent to the given proposition.

**(i) Proof by contradiction (Reductio Ad Absurdum)** : Here, we start with the assumption that the given statement is false. By rules of logic, we arrive at a conclusion contradicting the assumption and hence it is inferred that the assumption is wrong and hence the given statement is true.

Let us illustrate this method by an example.

**Example 5** Show that the set of all prime numbers is infinite.

**Solution** Let P be the set of all prime numbers. We take the negation of the statement “the set of all prime numbers is infinite”, i.e., we assume the set of all prime numbers to be finite. Hence, we can list all the prime numbers as  $P_1, P_2, P_3, \dots, P_k$  (say). Note that we have assumed that there is no prime number other than  $P_1, P_2, P_3, \dots, P_k$ .

Now consider  $N = (P_1 P_2 P_3 \dots P_k) + 1 \dots (1)$

N is not in the list as N is larger than any of the numbers in the list.

N is either prime or composite.

Fig A1.3

If  $N$  is a prime, then by (1), there exists a prime number which is not listed.

On the other hand, if  $N$  is composite, it should have a prime divisor. But none of the numbers in the list can divide  $N$ , because they all leave the remainder 1. Hence, the prime divisor should be other than the one in the list.

Thus, in both the cases whether  $N$  is a prime or a composite, we ended up with contradiction to the fact that we have listed all the prime numbers.

Hence, our assumption that set of all prime numbers is finite is false.

Thus, the set of all prime numbers is infinite.

 **Note** Observe that the above proof also uses the method of proof by cases.

## (ii) Proof by using contrapositive statement of the given statement

Instead of proving the conditional  $p \Rightarrow q$ , we prove its equivalent, i.e.,  $\sim q \Rightarrow \sim p$ . (students can verify).

The contrapositive of a conditional can be formed by interchanging the conclusion and the hypothesis and negating both.

**Example 6** Prove that the function  $f: \mathbf{R} \rightarrow \mathbf{R}$  defined by  $f(x) = 2x + 5$  is one-one.

**Solution** A function is one-one if  $f(x_1) = f(x_2) \Rightarrow x_1 = x_2$ .

Using this we have to show that " $2x_1 + 5 = 2x_2 + 5 \Rightarrow x_1 = x_2$ ". This is of the form  $p \Rightarrow q$ , where,  $p$  is  $2x_1 + 5 = 2x_2 + 5$  and  $q$  is  $x_1 = x_2$ . We have proved this in Example 2 of "direct method".

We can also prove the same by using contrapositive of the statement. Now contrapositive of this statement is  $\sim q \Rightarrow \sim p$ , i.e., contrapositive of "if  $f(x_1) = f(x_2)$ , then  $x_1 = x_2$ " is "if  $x_1 \neq x_2$ , then  $f(x_1) \neq f(x_2)$ ".

$$\begin{aligned} \text{Now} \quad & x_1 \neq x_2 \\ \Rightarrow & 2x_1 \neq 2x_2 \\ \Rightarrow & 2x_1 + 5 \neq 2x_2 + 5 \\ \Rightarrow & f(x_1) \neq f(x_2). \end{aligned}$$

Since " $\sim q \Rightarrow \sim p$ ", is equivalent to " $p \Rightarrow q$ " the proof is complete.

**Example 7** Show that "if a matrix  $A$  is invertible, then  $A$  is non singular".

**Solution** Writing the above statement in symbolic form, we have  $p \Rightarrow q$ , where,  $p$  is "matrix  $A$  is invertible" and  $q$  is " $A$  is non singular"

Instead of proving the given statement, we prove its contrapositive statement, i.e., if  $A$  is not a non singular matrix, then the matrix  $A$  is not invertible.

If  $A$  is not a non singular matrix, then it means the matrix  $A$  is singular, i.e.,

$$|A| = 0$$

Then  $A^{-1} = \frac{\text{adj } A}{|A|}$  does not exist as  $|A| = 0$

Hence,  $A$  is not invertible.

Thus, we have proved that if  $A$  is not a non singular matrix, then  $A$  is not invertible.  
i.e.,  $\sim q \Rightarrow \sim p$ .

Hence, if a matrix  $A$  is invertible, then  $A$  is non singular.

### (iii) Proof by a counter example

In the history of Mathematics, there are occasions when all attempts to find a valid proof of a statement fail and the uncertainty of the truth value of the statement remains unresolved.

In such a situation, it is beneficial, if we find an example to falsify the statement. The example to disprove the statement is called a *counter example*. Since the disproof of a proposition  $p \Rightarrow q$  is merely a proof of the proposition  $\sim (p \Rightarrow q)$ . Hence, this is also a method of proof.

**Example 8** For each  $n$ ,  $2^{2^n} + 1$  is a prime ( $n \in \mathbf{N}$ ).  
This was once thought to be true on the basis that

$$2^{2^1} + 1 = 2^2 + 1 = 5 \text{ is a prime.}$$

$$2^{2^2} + 1 = 2^4 + 1 = 17 \text{ is a prime.}$$

$$2^{2^3} + 1 = 2^8 + 1 = 257 \text{ is a prime.}$$

However, at first sight the generalisation looks to be correct. But, eventually it was shown that

$$2^{2^5} + 1 = 2^{32} + 1 = 4294967297$$

which is not a prime since  $4294967297 = 641 \times 6700417$  (a product of two numbers).

So the generalisation “For each  $n$ ,  $2^{2^n} + 1$  is a prime ( $n \in \mathbf{N}$ )” is false.

Just this one example  $2^{2^5} + 1$  is sufficient to disprove the generalisation. This is the counter example.

Thus, we have proved that the generalisation “For each  $n$ ,  $2^{2^n} + 1$  is a prime ( $n \in \mathbf{N}$ )” is not true in general.

**Example 9** Every continuous function is differentiable.

**Proof** We consider some functions given by

- (i)  $f(x) = x^2$
- (ii)  $g(x) = e^x$
- (iii)  $h(x) = \sin x$

These functions are continuous for all values of  $x$ . If we check for their differentiability, we find that they are all differentiable for all the values of  $x$ . This makes us to believe that the generalisation “Every continuous function is differentiable” may be true. But if we check the differentiability of the function given by “ $\phi(x) = |x|$ ” which is continuous, we find that it is not differentiable at  $x = 0$ . This means that the statement “Every continuous function is differentiable” is false, in general. Just this one function “ $\phi(x) = |x|$ ” is sufficient to disprove the statement. Hence, “ $\phi(x) = |x|$ ” is called a counter example to disprove “Every continuous function is differentiable”.

## MATHEMATICAL MODELLING

### A.2.1 Introduction

In class XI, we have learnt about mathematical modelling as an attempt to study some part (or form) of some real-life problems in mathematical terms, i.e., the conversion of a physical situation into mathematics using some suitable conditions. Roughly speaking mathematical modelling is an activity in which we make models to describe the behaviour of various phenomenal activities of our interest in many ways using words, drawings or sketches, computer programs, mathematical formulae etc.

In earlier classes, we have observed that solutions to many problems, involving applications of various mathematical concepts, involve mathematical modelling in one way or the other. Therefore, it is important to study mathematical modelling as a separate topic.

In this chapter, we shall further study mathematical modelling of some real-life problems using techniques/results from matrix, calculus and linear programming.

### A.2.2 Why Mathematical Modelling?

Students are aware of the solution of word problems in arithmetic, algebra, trigonometry and linear programming etc. Sometimes we solve the problems without going into the physical insight of the situational problems. Situational problems need physical insight that is **introduction** of physical laws and some symbols to compare the mathematical results obtained with practical values. To solve many problems faced by us, we need a technique and this is what is known as *mathematical modelling*. Let us consider the following problems:

- (i) To find the width of a river (particularly, when it is difficult to cross the river).
- (ii) To find the optimal angle in case of shot-put (by considering the variables such as : the height of the thrower, resistance of the media, acceleration due to gravity etc.).
- (iii) To find the height of a tower (particularly, when it is not possible to reach the top of the tower).
- (iv) To find the temperature at the surface of the Sun.

- (v) Why heart patients are not allowed to use lift? (without knowing the physiology of a human being).
- (vi) To find the mass of the Earth.
- (vii) Estimate the yield of pulses in India from the standing crops (a person is not allowed to cut all of it).
- (viii) Find the volume of blood inside the body of a person (a person is not allowed to bleed completely).
- (ix) Estimate the population of India in the year 2020 (a person is not allowed to wait till then).

All of these problems can be solved and infact have been solved with the help of Mathematics using mathematical modelling. In fact, you might have studied the methods for solving some of them in the present textbook itself. However, it will be instructive if you first try to solve them yourself and that too without the help of Mathematics, if possible, you will then appreciate the power of Mathematics and the need for mathematical modelling.

### A.2.3 Principles of Mathematical Modelling

Mathematical modelling is a principled activity and so it has some principles behind it. These principles are almost philosophical in nature. Some of the basic principles of mathematical modelling are listed below in terms of instructions:

- (i) Identify the need for the model. (for what we are looking for)
- (ii) List the parameters/variables which are required for the model.
- (iii) Identify the available relevent data. (what is given?)
- (iv) Identify the circumstances that can be applied (assumptions)
- (v) Identify the governing physical principles.
- (vi) Identify
  - (a) the equations that will be used.
  - (b) the calculations that will be made.
  - (c) the solution which will follow.
- (vii) Identify tests that can check the
  - (a) consistency of the model.
  - (b) utility of the model.
- (viii) Identify the parameter values that can improve the model.

The above principles of mathematical modelling lead to the following: steps for mathematical modelling.

**Step 1:** Identify the physical situation.

**Step 2:** Convert the physical situation into a mathematical model by introducing parameters / variables and using various known physical laws and symbols.

**Step 3:** Find the solution of the mathematical problem.

**Step 4:** Interpret the result in terms of the original problem and compare the result with observations or experiments.

**Step 5:** If the result is in good agreement, then accept the model. Otherwise modify the hypotheses / assumptions according to the physical situation and go to Step 2.

The above steps can also be viewed through the following diagram:

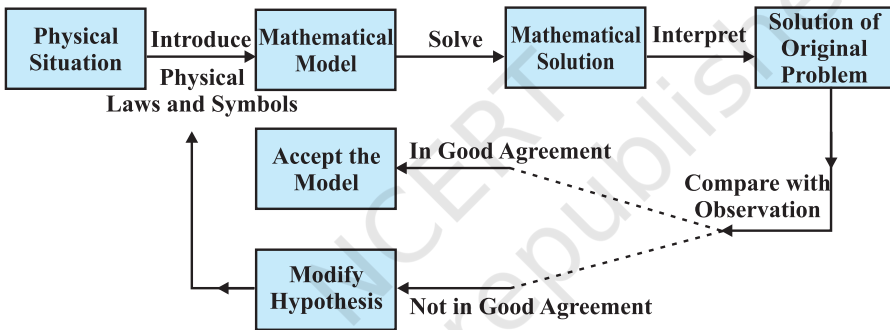

Fig A.2.1

**Example 1** Find the height of a given tower using mathematical modelling.

**Solution Step 1** Given physical situation is “to find the height of a given tower”.

**Step 2** Let AB be the given tower (Fig A.2.2). Let PQ be an observer measuring the height of the tower with his eye at P. Let  $PQ = h$  and let height of tower be  $H$ . Let  $\alpha$  be the angle of elevation from the eye of the observer to the top of the tower.

Fig A.2.2

Let

$$l = PC = QB$$

Now

$$\tan \alpha = \frac{AC}{PC} = \frac{H-h}{l}$$

or

$$H = h + l \tan \alpha \quad \dots (1)$$

**Step 3** Note that the values of the parameters  $h$ ,  $l$  and  $\alpha$  (using sextant) are known to the observer and so (1) gives the solution of the problem.

**Step 4** In case, if the foot of the tower is not accessible, i.e., when  $l$  is not known to the observer, let  $\beta$  be the angle of depression from  $P$  to the foot  $B$  of the tower. So from  $\Delta PQB$ , we have

$$\tan \beta = \frac{PQ}{QB} = \frac{h}{l} \text{ or } l = h \cot \beta$$

**Step 5** is not required in this situation as exact values of the parameters  $h$ ,  $l$ ,  $\alpha$  and  $\beta$  are known.

**Example 2** Let a business firm produces three types of products  $P_1$ ,  $P_2$  and  $P_3$  that uses three types of raw materials  $R_1$ ,  $R_2$  and  $R_3$ . Let the firm has purchase orders from two clients  $F_1$  and  $F_2$ . Considering the situation that the firm has a limited quantity of  $R_1$ ,  $R_2$  and  $R_3$ , respectively, prepare a model to determine the quantities of the raw material  $R_1$ ,  $R_2$  and  $R_3$  required to meet the purchase orders.

**Solution Step 1** The physical situation is well identified in the problem.

**Step 2** Let  $A$  be a matrix that represents purchase orders from the two clients  $F_1$  and  $F_2$ . Then,  $A$  is of the form

$$A = \begin{matrix} & \begin{matrix} P_1 & P_2 & P_3 \end{matrix} \\ \begin{matrix} F_1 \\ F_2 \end{matrix} & \begin{bmatrix} \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot \end{bmatrix} \end{matrix}$$

Let  $B$  be the matrix that represents the amount of raw materials  $R_1$ ,  $R_2$  and  $R_3$ , required to manufacture each unit of the products  $P_1$ ,  $P_2$  and  $P_3$ . Then,  $B$  is of the form

$$B = \begin{matrix} & \begin{matrix} R_1 & R_2 & R_3 \end{matrix} \\ \begin{matrix} P_1 \\ P_2 \\ P_3 \end{matrix} & \begin{bmatrix} \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot \end{bmatrix} \end{matrix}$$

**Step 3** Note that the product (which in this case is well defined) of matrices A and B is given by the following matrix

$$AB = \begin{matrix} & \begin{matrix} R_1 & R_2 & R_3 \end{matrix} \\ \begin{matrix} F_1 \\ F_2 \end{matrix} & \begin{bmatrix} \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot \end{bmatrix} \end{matrix}$$

which in fact gives the desired quantities of the raw materials  $R_1$ ,  $R_2$  and  $R_3$  to fulfill the purchase orders of the two clients  $F_1$  and  $F_2$ .

**Example 3** Interpret the model in Example 2, in case

$$A = \begin{bmatrix} 10 & 15 & 6 \\ 10 & 20 & 0 \end{bmatrix}, B = \begin{bmatrix} 3 & 4 & 0 \\ 7 & 9 & 3 \\ 5 & 12 & 7 \end{bmatrix}$$

and the available raw materials are 330 units of  $R_1$ , 455 units of  $R_2$  and 140 units of  $R_3$ .

**Solution** Note that

$$\begin{aligned} AB &= \begin{bmatrix} 10 & 15 & 6 \\ 10 & 20 & 0 \end{bmatrix} \begin{bmatrix} 3 & 4 & 0 \\ 7 & 9 & 3 \\ 5 & 12 & 7 \end{bmatrix} \\ &= \begin{matrix} & \begin{matrix} R_1 & R_2 & R_3 \end{matrix} \\ \begin{matrix} F_1 \\ F_2 \end{matrix} & \begin{bmatrix} 165 & 247 & 87 \\ 170 & 220 & 60 \end{bmatrix} \end{matrix} \end{aligned}$$

This clearly shows that to meet the purchase order of  $F_1$  and  $F_2$ , the raw material required is 335 units of  $R_1$ , 467 units of  $R_2$  and 147 units of  $R_3$  which is much more than the available raw material. Since the amount of raw material required to manufacture each unit of the three products is fixed, we can either ask for an increase in the available raw material or we may ask the clients to reduce their orders.

**Remark** If we replace A in Example 3 by  $A_1$  given by

$$A_1 = \begin{bmatrix} 9 & 12 & 6 \\ 10 & 20 & 0 \end{bmatrix}$$

i.e., if the clients agree to reduce their purchase orders, then

$$A_1 B = \begin{bmatrix} 9 & 12 & 6 \\ 10 & 20 & 0 \end{bmatrix} \begin{bmatrix} 3 & 4 & 0 \\ 7 & 9 & 3 \\ 5 & 12 & 7 \end{bmatrix} = \begin{bmatrix} 141 & 216 & 78 \\ 170 & 220 & 60 \end{bmatrix}$$

This requires 311 units of  $R_1$ , 436 units of  $R_2$  and 138 units of  $R_3$  which are well below the available raw materials, i.e., 330 units of  $R_1$ , 455 units of  $R_2$  and 140 units of  $R_3$ . Thus, if the revised purchase orders of the clients are given by  $A_1$ , then the firm can easily supply the purchase orders of the two clients.

 **Note** One may further modify  $A$  so as to make full use of the available raw material.

**Query** Can we make a mathematical model with a given  $B$  and with fixed quantities of the available raw material that can help the firm owner to ask the clients to modify their orders in such a way that the firm makes the full use of its available raw material?

The answer to this query is given in the following example:

**Example 4** Suppose  $P_1$ ,  $P_2$ ,  $P_3$  and  $R_1$ ,  $R_2$ ,  $R_3$  are as in Example 2. Let the firm has 330 units of  $R_1$ , 455 units of  $R_2$  and 140 units of  $R_3$  available with it and let the amount of raw materials  $R_1$ ,  $R_2$  and  $R_3$  required to manufacture each unit of the three products is given by

$$B = \begin{matrix} & \begin{matrix} R_1 & R_2 & R_3 \end{matrix} \\ \begin{matrix} P_1 \\ P_2 \\ P_3 \end{matrix} & \begin{bmatrix} 3 & 4 & 0 \\ 7 & 9 & 3 \\ 5 & 12 & 7 \end{bmatrix} \end{matrix}$$

How many units of each product is to be made so as to utilise the full available raw material?

**Solution Step 1** The situation is easily identifiable.

**Step 2** Suppose the firm produces  $x$  units of  $P_1$ ,  $y$  units of  $P_2$  and  $z$  units of  $P_3$ . Since product  $P_1$  requires 3 units of  $R_1$ ,  $P_2$  requires 7 units of  $R_1$  and  $P_3$  requires 5 units of  $R_1$  (observe matrix  $B$ ) and the total number of units, of  $R_1$ , available is 330, we have

$$3x + 7y + 5z = 330 \text{ (for raw material } R_1\text{)}$$

Similarly, we have

$$4x + 9y + 12z = 455 \text{ (for raw material } R_2\text{)}$$

and

$$0x + 3y + 7z = 140 \text{ (for raw material } R_3\text{)}$$

This system of equations can be expressed in matrix form as

$$\begin{bmatrix} 3 & 7 & 5 \\ 4 & 9 & 12 \\ 0 & 3 & 7 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \end{bmatrix} = \begin{bmatrix} 330 \\ 455 \\ 140 \end{bmatrix}$$

**Step 3** Using elementary row operations, we obtain

$$\begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \end{bmatrix} = \begin{bmatrix} 20 \\ 35 \\ 5 \end{bmatrix}$$

This gives  $x = 20$ ,  $y = 35$  and  $z = 5$ . Thus, the firm can produce 20 units of  $P_1$ , 35 units of  $P_2$  and 5 units of  $P_3$  to make full use of its available raw material.

**Remark** One may observe that if the manufacturer decides to manufacture according to the available raw material and not according to the purchase orders of the two clients  $F_1$  and  $F_2$  (as in Example 3), he/she is unable to meet these purchase orders as  $F_1$  demanded 6 units of  $P_3$  whereas the manufacturer can make only 5 units of  $P_3$ .

**Example 5** A manufacturer of medicines is preparing a production plan of medicines  $M_1$  and  $M_2$ . There are sufficient raw materials available to make 20000 bottles of  $M_1$  and 40000 bottles of  $M_2$ , but there are only 45000 bottles into which either of the medicines can be put. Further, it takes 3 hours to prepare enough material to fill 1000 bottles of  $M_1$ , it takes 1 hour to prepare enough material to fill 1000 bottles of  $M_2$  and there are 66 hours available for this operation. The profit is Rs 8 per bottle for  $M_1$  and Rs 7 per bottle for  $M_2$ . How should the manufacturer schedule his/her production in order to maximise profit?

**Solution Step 1** To find the number of bottles of  $M_1$  and  $M_2$  in order to maximise the profit under the given hypotheses.

**Step 2** Let  $x$  be the number of bottles of type  $M_1$  medicine and  $y$  be the number of bottles of type  $M_2$  medicine. Since profit is Rs 8 per bottle for  $M_1$  and Rs 7 per bottle for  $M_2$ , therefore the objective function (which is to be maximised) is given by

$$Z \equiv Z(x, y) = 8x + 7y$$

The objective function is to be maximised subject to the constraints (Refer Chapter 12 on Linear Programming)

$$\left. \begin{array}{l} x \leq 20000 \\ y \leq 40000 \\ x + y \leq 45000 \\ 3x + y \leq 66000 \\ x \geq 0, y \geq 0 \end{array} \right\} \dots (1)$$

**Step 3** The shaded region OPQRST is the feasible region for the constraints (1) (Fig A.2.3). The co-ordinates of vertices O, P, Q, R, S and T are (0, 0), (20000, 0), (20000, 6000), (10500, 34500), (5000, 40000) and (0, 40000), respectively.

Fig A.2.3

Note that

$$Z \text{ at } P(0, 0) = 0$$

$$Z \text{ at } P(20000, 0) = 8 \times 20000 = 160000$$

$$Z \text{ at } Q(20000, 6000) = 8 \times 20000 + 7 \times 6000 = 202000$$

$$Z \text{ at } R(10500, 34500) = 8 \times 10500 + 7 \times 34500 = 325500$$

$$Z \text{ at } S(5000, 40000) = 8 \times 5000 + 7 \times 40000 = 320000$$

$$Z \text{ at } T(0, 40000) = 7 \times 40000 = 280000$$

Now observe that the profit is maximum at  $x = 10500$  and  $y = 34500$  and the maximum profit is ₹325500. Hence, the manufacturer should produce 10500 bottles of  $M_1$  medicine and 34500 bottles of  $M_2$  medicine in order to get maximum profit of ₹325500.

**Example 6** Suppose a company plans to produce a new product that incur some costs (fixed and variable) and let the company plans to sell the product at a fixed price. Prepare a mathematical model to examine the profitability.

**Solution Step 1** Situation is clearly identifiable.

**Step 2 Formulation:** We are given that the costs are of two types: fixed and variable. The fixed costs are independent of the number of units produced (e.g., rent and rates), while the variable costs increase with the number of units produced (e.g., material). Initially, we assume that the variable costs are directly proportional to the number of units produced — this should simplify our model. The company earn a certain amount of money by selling its products and wants to ensure that it is maximum. For convenience, we assume that all units produced are sold immediately.

### The mathematical model

Let  $x$  = number of units produced and sold

$C$  = total cost of production (in rupees)

$I$  = income from sales (in rupees)

$P$  = profit (in rupees)

Our assumptions above state that  $C$  consists of two parts:

- (i) fixed cost =  $a$  (in rupees),
- (ii) variable cost =  $b$  (rupees/unit produced).

Then  $C = a + bx$  ... (1)

Also, income  $I$  depends on selling price  $s$  (rupees/unit)

Thus  $I = sx$  ... (2)

The profit  $P$  is then the difference between income and costs. So

$$\begin{aligned} P &= I - C \\ &= sx - (a + bx) \\ &= (s - b)x - a \end{aligned} \quad \dots (3)$$

We now have a mathematical model of the relationships (1) to (3) between the variables  $x$ ,  $C$ ,  $I$ ,  $P$ ,  $a$ ,  $b$ ,  $s$ . These variables may be classified as:

independent	$x$
dependent	$C, I, P$
parameters	$a, b, s$

The manufacturer, knowing  $x$ ,  $a$ ,  $b$ ,  $s$  can determine  $P$ .

**Step 3** From (3), we can observe that for the break even point (i.e., make neither profit nor loss), he must have  $P = 0$ , i.e.,  $x = \frac{a}{s-b}$  units.

**Steps 4 and 5** In view of the break even point, one may conclude that if the company produces few units, i.e., less than  $x = \frac{a}{s-b}$  units, then the company will suffer loss

and if it produces large number of units, i.e., much more than  $\frac{a}{s-b}$  units, then it can make huge profit. Further, if the break even point proves to be unrealistic, then another model could be tried or the assumptions regarding cash flow may be modified.

**Remark** From (3), we also have

$$\frac{dP}{dx} = s - b$$

This means that rate of change of  $P$  with respect to  $x$  depends on the quantity  $s - b$ , which is the difference of selling price and the variable cost of each product. Thus, in order to gain profit, this should be positive and to get large gains, we need to produce large quantity of the product and at the same time try to reduce the variable cost.

**Example 7** Let a tank contains 1000 litres of brine which contains 250 g of salt per litre. Brine containing 200 g of salt per litre flows into the tank at the rate of 25 litres per minute and the mixture flows out at the same rate. Assume that the mixture is kept uniform all the time by stirring. What would be the amount of salt in the tank at any time  $t$ ?

**Solution Step 1** The situation is easily identifiable.

**Step 2** Let  $y = y(t)$  denote the amount of salt (in kg) in the tank at time  $t$  (in minutes) after the inflow, outflow starts. Further assume that  $y$  is a differentiable function.

When  $t = 0$ , i.e., before the inflow–outflow of the brine starts,

$$y = 250 \text{ g} \times 1000 = 250 \text{ kg}$$

Note that the change in  $y$  occurs due to the inflow, outflow of the mixture.

Now the inflow of brine brings salt into the tank at the rate of 5 kg per minute (as  $25 \times 200 \text{ g} = 5 \text{ kg}$ ) and the outflow of brine takes salt out of the tank at the rate of

$$25 \left( \frac{y}{1000} \right) = \frac{y}{40} \text{ kg per minute (as at time } t, \text{ the salt in the tank is } \frac{y}{1000} \text{ kg)}.$$

Thus, the rate of change of salt with respect to  $t$  is given by

$$\frac{dy}{dt} = 5 - \frac{y}{40} \quad (\text{Why?})$$

$$\text{or} \quad \frac{dy}{dt} + \frac{1}{40}y = 5 \quad \dots (1)$$

This gives a mathematical model for the given problem.

**Step 3** Equation (1) is a linear equation and can be easily solved. The solution of (1) is given by

$$y e^{\frac{t}{40}} = 200 e^{\frac{t}{40}} + C \text{ or } y(t) = 200 + C e^{-\frac{t}{40}} \quad \dots (2)$$

where,  $c$  is the constant of integration.

Note that when  $t = 0$ ,  $y = 250$ . Therefore,  $250 = 200 + C$

$$\text{or} \quad C = 50$$

Then (2) reduces to

$$y = 200 + 50 e^{-\frac{t}{40}} \quad \dots (3)$$

$$\text{or} \quad \frac{y-200}{50} = e^{-\frac{t}{40}}$$

$$\text{or} \quad e^{\frac{t}{40}} = \frac{50}{y-200}$$

$$\text{Therefore} \quad t = 40 \log_e \left( \frac{50}{y-200} \right) \quad \dots (4)$$

Here, the equation (4) gives the time  $t$  at which the salt in tank is  $y$  kg.

**Step 4** Since  $e^{-\frac{t}{40}}$  is always positive, from (3), we conclude that  $y > 200$  at all times. Thus, the minimum amount of salt content in the tank is 200 kg.

Also, from (4), we conclude that  $t > 0$  if and only if  $0 < y - 200 < 50$  i.e., if and only if  $200 < y < 250$  i.e., the amount of salt content in the tank after the start of inflow and outflow of the brine is between 200 kg and 250 kg.

### *Limitations of Mathematical Modelling*

Till today many mathematical models have been developed and applied successfully to understand and get an insight into thousands of situations. Some of the subjects like mathematical physics, mathematical economics, operations research, bio-mathematics etc. are almost synonymous with mathematical modelling.

But there are still a large number of situations which are yet to be modelled. The reason behind this is that either the situation are found to be very complex or the mathematical models formed are mathematically intractable.

The development of the powerful computers and super computers has enabled us to mathematically model a large number of situations (even complex situations). Due to these fast and advanced computers, it has been possible to prepare more realistic models which can obtain better agreements with observations.

However, we do not have good guidelines for choosing various parameters / variables and also for estimating the values of these parameters / variables used in a mathematical model. Infact, we can prepare reasonably accurate models to fit any data by choosing five or six parameters / variables. We require a minimal number of parameters / variables to be able to estimate them accurately.

Mathematical modelling of large or complex situations has its own special problems. These type of situations usually occur in the study of world models of environment, oceanography, pollution control etc. Mathematical modellers from all disciplines — mathematics, computer science, physics, engineering, social sciences, etc., are involved in meeting these challenges with courage.

3. (i) 0, 8, (ii) 0, 8    4. (i)  $y = 2x$ , (ii)  $x - 3y = 0$     5. (D)

### EXERCISE 4.3

1. (i)  $M_{11} = 3, M_{12} = 0, M_{21} = -4, M_{22} = 2, A_{11} = 3, A_{12} = 0, A_{21} = 4, A_{22} = 2$   
 (ii)  $M_{11} = d, M_{12} = b, M_{21} = c, M_{22} = a$   
 $A_{11} = d, A_{12} = -b, A_{21} = -c, A_{22} = a$
2. (i)  $M_{11} = 1, M_{12} = 0, M_{13} = 0, M_{21} = 0, M_{22} = 1, M_{23} = 0, M_{31} = 0, M_{32} = 0, M_{33} = 1,$   
 $A_{11} = 1, A_{12} = 0, A_{13} = 0, A_{21} = 0, A_{22} = 1, A_{23} = 0, A_{31} = 0, A_{32} = 0, A_{33} = 1$   
 (ii)  $M_{11} = 11, M_{12} = 6, M_{13} = 3, M_{21} = -4, M_{22} = 2, M_{23} = 1, M_{31} = -20, M_{32} = -13, M_{33} = 5$   
 $A_{11} = 11, A_{12} = -6, A_{13} = 3, A_{21} = 4, A_{22} = 2, A_{23} = -1, A_{31} = -20, A_{32} = 13, A_{33} = 5$
3. 7    4.  $(x - y)(y - z)(z - x)$     5. (D)

### EXERCISE 4.4

1.  $\begin{bmatrix} 4 & -2 \\ -3 & 1 \end{bmatrix}$     2.  $\begin{bmatrix} 3 & 1 & -11 \\ -12 & 5 & -1 \\ 6 & 2 & 5 \end{bmatrix}$     5.  $\frac{1}{14} \begin{bmatrix} 3 & 2 \\ -4 & 2 \end{bmatrix}$
6.  $\frac{1}{13} \begin{bmatrix} 2 & -5 \\ 3 & -1 \end{bmatrix}$     7.  $\frac{1}{10} \begin{bmatrix} 10 & -10 & 2 \\ 0 & 5 & -4 \\ 0 & 0 & 2 \end{bmatrix}$     8.  $\frac{-1}{3} \begin{bmatrix} -3 & 0 & 0 \\ 3 & -1 & 0 \\ -9 & -2 & 3 \end{bmatrix}$
9.  $\frac{-1}{3} \begin{bmatrix} -1 & 5 & 3 \\ -4 & 23 & 12 \\ 1 & -11 & -6 \end{bmatrix}$     10.  $\begin{bmatrix} -2 & 0 & 1 \\ 9 & 2 & -3 \\ 6 & 1 & -2 \end{bmatrix}$     11.  $\begin{bmatrix} 1 & 0 & 0 \\ 0 & \cos \alpha & \sin \alpha \\ 0 & \sin \alpha & -\cos \alpha \end{bmatrix}$
13.  $\frac{1}{7} \begin{bmatrix} 2 & -1 \\ 1 & 3 \end{bmatrix}$     14.  $a = -4, b = 1$     15.  $A^{-1} = \frac{1}{11} \begin{bmatrix} -3 & 4 & 5 \\ 9 & -1 & -4 \\ 5 & -3 & -1 \end{bmatrix}$
16.  $\frac{1}{4} \begin{bmatrix} 3 & 1 & -1 \\ 1 & 3 & 1 \\ -1 & 1 & 3 \end{bmatrix}$     17. B    18. B

**EXERCISE 4.5**

1. Consistent      2. Consistent      3. Inconsistent
4. Consistent      5. Inconsistent      6. Consistent
7.  $x = 2, y = -3$       8.  $x = \frac{-5}{11}, y = \frac{12}{11}$       9.  $x = \frac{-6}{11}, y = \frac{-19}{11}$
10.  $x = -1, y = 4$       11.  $x = 1, y = \frac{1}{2}, z = \frac{-3}{2}$
12.  $x = 2, y = -1, z = 1$       13.  $x = 1, y = 2, z = -1$
14.  $x = 2, y = 1, z = 3$
15.  $\begin{bmatrix} 0 & 1 & -2 \\ -2 & 9 & -23 \\ -1 & 5 & -13 \end{bmatrix}, x = 1, y = 2, z = 3$
16. cost of onions per kg = ₹ 5  
cost of wheat per kg = ₹ 8  
cost of rice per kg = ₹ 8

**Miscellaneous Exercise on Chapter 4**

2. 1      3.  $\begin{bmatrix} 9 & -3 & 5 \\ -2 & 1 & 0 \\ 1 & 0 & 2 \end{bmatrix}$
5.  $-2(x^3 + y^3)$       6.  $xy$       7.  $x = 2, y = 3, z = 5$
8. A      9. D

**EXERCISE 5.1**

2.  $f$  is continuous at  $x = 3$
3. (a), (b), (c) and (d) are all continuous functions
5.  $f$  is continuous at  $x = 0$  and  $x = 2$ ; Not continuous at  $x = 1$
6. Discontinuous at  $x = 2$       7. Discontinuous at  $x = 3$

8. Discontinuous at  $x = 0$       9. No point of discontinuity  
 10. No point of discontinuity      11. No point of discontinuity  
 12.  $f$  is discontinuous at  $x = 1$       13.  $f$  is not continuous at  $x = 1$   
 14.  $f$  is not continuous at  $x = 1$  and  $x = 3$   
 15.  $x = 1$  is the only point of discontinuity
16. Continuous      17.  $a = b + \frac{2}{3}$
18. For no value of  $\lambda$ ,  $f$  is continuous at  $x = 0$  but  $f$  is continuous at  $x = 1$  for any value of  $\lambda$ .
20.  $f$  is continuous at  $x = \pi$       21. (a), (b) and (c) are all continuous
22. Cosine function is continuous for all  $x \in \mathbf{R}$ ; cosecant is continuous except for  $x = n\pi$ ,  $n \in \mathbf{Z}$ ; secant is continuous except for  $x = (2n+1)\frac{\pi}{2}$ ,  $n \in \mathbf{Z}$  and cotangent function is continuous except for  $x = n\pi$ ,  $n \in \mathbf{Z}$
23. There is no point of discontinuity.
24. Yes,  $f$  is continuous for all  $x \in \mathbf{R}$       25.  $f$  is continuous for all  $x \in \mathbf{R}$
26.  $k = 6$       27.  $k = \frac{3}{4}$       28.  $k = \frac{-2}{\pi}$
29.  $k = \frac{9}{5}$       30.  $a = 2, b = 1$
34. There is no point of discontinuity.

### EXERCISE 5.2

1.  $2x \cos(x^2 + 5)$       2.  $-\cos x \sin(\sin x)$       3.  $a \cos(ax + b)$
4.  $\frac{\sec(\tan \sqrt{x}) \cdot \tan(\tan \sqrt{x}) \cdot \sec^2 \sqrt{x}}{2\sqrt{x}}$
5.  $a \cos(ax + b) \sec(cx + d) + c \sin(ax + b) \tan(cx + d) \sec(cx + d)$
6.  $10x^4 \sin^5 \cos x^5 \cos x^3 - 3x^2 \sin x^3 \sin^2 x^5$
7.  $\frac{-2\sqrt{2}x}{\sin x^2 \sqrt{\sin 2x^2}}$       8.  $-\frac{\sin \sqrt{x}}{2\sqrt{x}}$

**EXERCISE 5.3**

1.  $\frac{\cos x - 2}{3}$
2.  $\frac{2}{\cos y - 3}$
3.  $-\frac{a}{2by + \sin y}$
4.  $\frac{\sec^2 x - y}{x + 2y - 1}$
5.  $-\frac{(2x + y)}{(x + 2y)}$
6.  $-\frac{(3x^2 + 2xy + y^2)}{(x^2 + 2xy + 3y^2)}$
7.  $\frac{y \sin xy}{\sin 2y - x \sin xy}$
8.  $\frac{\sin 2x}{\sin 2y}$
9.  $\frac{2}{1 + x^2}$
10.  $\frac{3}{1 + x^2}$
11.  $\frac{2}{1 + x^2}$
12.  $\frac{-2}{1 + x^2}$
13.  $\frac{-2}{1 + x^2}$
14.  $\frac{2}{\sqrt{1 - x^2}}$
15.  $-\frac{2}{\sqrt{1 - x^2}}$

**EXERCISE 5.4**

1.  $\frac{e^x (\sin x - \cos x)}{\sin^2 x}, x \neq n\pi, n \in \mathbf{Z}$
2.  $\frac{e^{\sin^{-1} x}}{\sqrt{1 - x^2}}, x \in (-1, 1)$
3.  $3x^2 e^{x^3}$
4.  $-\frac{e^{-x} \cos(\tan^{-1} e^{-x})}{1 + e^{-2x}}$
5.  $-e^x \tan e^x, e^x \neq (2n + 1)\frac{\pi}{2}, n \in \mathbf{N}$
6.  $e^x + 2x^{e^{x^2}} + 3x^2 e^{x^3} + 4x^3 e^{x^4} + 5x^4 e^{x^5}$
7.  $\frac{e^{\sqrt{x}}}{4\sqrt{x}e^{\sqrt{x}}}, x > 0$
8.  $\frac{1}{x \log x}, x > 1$
9.  $-\frac{(x \sin x \cdot \log x + \cos x)}{x(\log x)^2}, x > 0$
10.  $-\frac{1}{x} + e^x \sin(\log x + e^x), x > 0$

**EXERCISE 5.5**

1.  $-\cos x \cos 2x \cos 3x [\tan x + 2 \tan 2x + 3 \tan 3x]$
2.  $\frac{1}{2} \sqrt{\frac{(x-1)(x-2)}{(x-3)(x-4)(x-5)}} \left[ \frac{1}{x-1} + \frac{1}{x-2} - \frac{1}{x-3} - \frac{1}{x-4} - \frac{1}{x-5} \right]$

3.  $(\log x)^{\cos x} \left[ \frac{\cos x}{x \log x} - \sin x \log(\log x) \right]$
4.  $x^x (1 + \log x) - 2^{\sin x} \cos x \log 2$
5.  $(x+3)(x+4)^2(x+5)^3(9x^2+70x+133)$
6.  $\left(x + \frac{1}{x}\right)^x \left[ \frac{x^2-1}{x^2+1} + \log\left(x + \frac{1}{x}\right) \right] + x^{1+\frac{1}{x}} \left( \frac{x+1-\log x}{x^2} \right)$
7.  $(\log x)^{x-1} [1 + \log x \cdot \log(\log x)] + 2x^{\log x - 1} \cdot \log x$
8.  $(\sin x)^x (x \cot x + \log \sin x) + \frac{1}{2} \frac{1}{\sqrt{x-x^2}}$
9.  $x^{\sin x} \left[ \frac{\sin x}{x} + \cos x \log x \right] + (\sin x)^{\cos x} [\cos x \cot x - \sin x \log \sin x]$
10.  $x^{x \cos x} [\cos x \cdot (1 + \log x) - x \sin x \log x] - \frac{4x}{(x^2-1)^2}$
11.  $(x \cos x)^x [1 - x \tan x + \log(x \cos x)] + (x \sin x)^{\frac{1}{x}} \left[ \frac{x \cot x + 1 - \log(x \sin x)}{x^2} \right]$
12.  $-\frac{yx^{y-1} + y^x \log y}{x^y \log x + xy^{x-1}}$
13.  $\frac{y}{x} \left( \frac{y - x \log y}{x - y \log x} \right)$
14.  $\frac{y \tan x + \log \cos y}{x \tan y + \log \cos x}$
15.  $\frac{y(x-1)}{x(y+1)}$
16.  $(1+x)(1+x^2)(1+x^4)(1+x^8) \left[ \frac{1}{1+x} + \frac{2x}{1+x^2} + \frac{4x^3}{1+x^4} + \frac{8x^7}{1+x^8} \right]; f'(1) = 120$
17.  $5x^4 - 20x^3 + 45x^2 - 52x + 11$

### EXERCISE 5.6

1.  $t^2$       2.  $\frac{b}{a}$       3.  $-4 \sin t$       4.  $-\frac{1}{t^2}$
5.  $\frac{\cos \theta - 2 \cos 2\theta}{2 \sin 2\theta - \sin \theta}$       6.  $-\cot \frac{\theta}{2}$       7.  $-\cot 3t$       8.  $\tan t$
9.  $\frac{b}{a} \operatorname{cosec} \theta$       10.  $\tan \theta$

## EXERCISE 5.7

1. 2
2.  $380 x^{18}$
3.  $-x \cos x - 2 \sin x$
4.  $-\frac{1}{x^2}$
5.  $x(5 + 6 \log x)$
6.  $2e^x(5 \cos 5x - 12 \sin 5x)$
7.  $9 e^{6x}(3 \cos 3x - 4 \sin 3x)$
8.  $-\frac{2x}{(1+x^2)^2}$
9.  $-\frac{(1+\log x)}{(x \log x)^2}$
10.  $-\frac{\sin(\log x) + \cos(\log x)}{x^2}$
12.  $-\cot y \operatorname{cosec}^2 y$

## Miscellaneous Exercise on Chapter 5

1.  $27(3x^2 - 9x + 5)^8(2x - 3)$
2.  $3 \sin x \cos x (\sin x - 2 \cos^4 x)$
3.  $(5x)^{3 \cos 2x} \left[ \frac{3 \cos 2x}{x} - 6 \sin 2x \log 5x \right]$
4.  $\frac{3}{2} \sqrt{\frac{x}{1-x^3}}$
5.  $-\left[ \frac{1}{\sqrt{4-x^2} \sqrt{2x+7}} + \frac{\cos^{-1} \frac{x}{2}}{(2x+7)^{\frac{3}{2}}} \right]$
6.  $\frac{1}{2}$
7.  $(\log x)^{\log x} \left[ \frac{1}{x} + \frac{\log(\log x)}{x} \right], x > 1$
8.  $(a \sin x - b \cos x) \sin(a \cos x + b \sin x)$
9.  $(\sin x - \cos x)^{\sin x - \cos x} (\cos x + \sin x) (1 + \log(\sin x - \cos x)), \sin x > \cos x$
10.  $x^x(1 + \log x) + ax^{a-1} + a^x \log a$
11.  $x^{x^2-3} \left[ \frac{x^2-3}{x} + 2x \log x \right] + (x-3)^{x^2} \left[ \frac{x^2}{x-3} + 2x \log(x-3) \right]$
12.  $\frac{6}{5} \cot \frac{t}{2}$
13. 0
17.  $\frac{\sec^3 t}{at}, 0 < t < \frac{\pi}{2}$

**EXERCISE 6.1**

1. (a)  $6\pi \text{ cm}^2/\text{cm}$  (b)  $8\pi \text{ cm}^2/\text{cm}$
2.  $\frac{8}{3} \text{ cm}^2/\text{s}$  3.  $60\pi \text{ cm}^2/\text{s}$  4.  $900 \text{ cm}^3/\text{s}$
5.  $80\pi \text{ cm}^2/\text{s}$  6.  $1.4\pi \text{ cm}/\text{s}$
7. (a)  $-2 \text{ cm}/\text{min}$  (b)  $2 \text{ cm}^2/\text{min}$
8.  $\frac{1}{\pi} \text{ cm}/\text{s}$  9.  $400\pi \text{ cm}^3/\text{cm}$  10.  $\frac{8}{3} \text{ cm}/\text{s}$
11.  $(4, 11)$  and  $\left(-4, \frac{-31}{3}\right)$  12.  $2\pi \text{ cm}^3/\text{s}$
13.  $\frac{27}{8}\pi(2x+1)^2$  14.  $\frac{1}{48\pi} \text{ cm}/\text{s}$  15. ₹20.967
16. ₹208 17. B 18. D

**EXERCISE 6.2**

4. (a)  $\left(\frac{3}{4}, \infty\right)$  (b)  $\left(-\infty, \frac{3}{4}\right)$
5. (a)  $(-\infty, -2)$  and  $(3, \infty)$  (b)  $(-2, 3)$
6. (a) decreasing for  $x < -1$  and increasing for  $x > -1$   
 (b) decreasing for  $x > -\frac{3}{2}$  and increasing for  $x < -\frac{3}{2}$   
 (c) increasing for  $-2 < x < -1$  and decreasing for  $x < -2$  and  $x > -1$   
 (d) increasing for  $x < -\frac{9}{2}$  and decreasing for  $x > -\frac{9}{2}$   
 (e) increasing in  $(1, 3)$  and  $(3, \infty)$ , decreasing in  $(-\infty, -1)$  and  $(-1, 1)$ .
8.  $0 < x < 1$  and  $x > 2$  12. A, B
13. D 14.  $a > -2$  19. D

## EXERCISE 6.3

1. (i) Minimum Value = 3      (ii) Minimum Value = -2  
 (iii) Maximum Value = 10      (iv) Neither minimum nor maximum value
2. (i) Minimum Value = -1; No maximum value  
 (ii) Maximum Value = 3; No minimum value  
 (iii) Minimum Value = 4; Maximum Value = 6  
 (iv) Minimum Value = 2; Maximum Value = 4  
 (v) Neither minimum nor Maximum Value
3. (i) local minimum at  $x = 0$ ,      local minimum value = 0  
 (ii) local minimum at  $x = 1$ ,      local minimum value = -2  
      local maximum at  $x = -1$ ,      local maximum value = 2  
 (iii) local maximum at  $x = \frac{\pi}{4}$ ,      local maximum value =  $\sqrt{2}$   
 (iv) local maximum at  $x = \frac{3\pi}{4}$ ,      local maximum value =  $\sqrt{2}$   
      local minimum at  $x = \frac{7\pi}{4}$ ,      local minimum value =  $-\sqrt{2}$   
 (v) local maximum at  $x = 1$ ,      local maximum value = 19  
      local minimum at  $x = 3$ ,      local minimum value = 15  
 (vi) local minimum at  $x = 2$ ,      local minimum value = 2  
 (vii) local maximum at  $x = 0$ ,      local maximum value =  $\frac{1}{2}$   
 (viii) local maximum at  $x = \frac{2}{3}$ ,      local maximum value =  $\frac{2\sqrt{3}}{9}$

5. (i) Absolute minimum value =  $-8$ , absolute maximum value =  $8$   
 (ii) Absolute minimum value =  $-1$ , absolute maximum value =  $\sqrt{2}$   
 (iii) Absolute minimum value =  $-10$ , absolute maximum value =  $8$   
 (iv) Absolute minimum value =  $19$ , absolute maximum value =  $3$
6. Maximum profit =  $113$  unit.
7. Minima at  $x = 2$ , minimum value =  $-39$ , Maxima at  $x = 0$ , maximum value =  $25$ .
8. At  $x = \frac{\pi}{4}$  and  $\frac{5\pi}{4}$       9. Maximum value =  $\sqrt{2}$
10. Maximum at  $x = 3$ , maximum value  $89$ ; maximum at  $x = -2$ , maximum value =  $139$
11.  $a = 120$
12. Maximum at  $x = 2\pi$ , maximum value =  $2\pi$ ; Minimum at  $x = 0$ , minimum value =  $0$
13.  $12, 12$       14.  $45, 15$       15.  $25, 10$       16.  $8, 8$
17.  $3$  cm      18.  $x = 5$  cm
21. radius =  $\left(\frac{50}{\pi}\right)^{\frac{1}{3}}$  cm and height =  $2\left(\frac{50}{\pi}\right)^{\frac{1}{3}}$  cm
22.  $\frac{112}{\pi+4}$  cm,  $\frac{28\pi}{\pi+4}$  cm      27. A      28. D      29. C

### Miscellaneous Exercise on Chapter 6

2.  $b\sqrt{3}$  cm<sup>2</sup>/s
3. (i)  $0 \leq x \leq \frac{\pi}{2}$  and  $\frac{3\pi}{2} < x < 2\pi$       (ii)  $\frac{\pi}{2} < x < \frac{3\pi}{2}$
4. (i)  $x < -1$  and  $x > 1$       (ii)  $-1 < x < 1$

5.  $\frac{3\sqrt{3}}{4}ab$

6. Rs 1000

8. length =  $\frac{20}{\pi+4}$  m, breadth =  $\frac{10}{\pi+4}$  m

10. (i) local maxima at  $x = \frac{2}{7}$  (ii) local minima at  $x = 2$   
(iii) point of inflection at  $x = -1$

11. Absolute maximum =  $\frac{5}{4}$ , Absolute minimum = 1

14.  $\frac{4\pi R^3}{3\sqrt{3}}$

16. A

## SUPPLEMENTARY MATERIAL

### CHAPTER 5

*Theorem 5 (To be on page 129 under the heading Theorem 5)*

**(i) Derivative of Exponential Function  $f(x) = e^x$ .**

If  $f(x) = e^x$ , then

$$\begin{aligned}
 f'(x) &= \lim_{\Delta x \rightarrow 0} \frac{f(x + \Delta x) - f(x)}{\Delta x} \\
 &= \lim_{\Delta x \rightarrow 0} \frac{e^{x + \Delta x} - e^x}{\Delta x} \\
 &= e^x \cdot \lim_{\Delta x \rightarrow 0} \frac{e^{\Delta x} - 1}{\Delta x} \\
 &= e^x \cdot 1 \left[ \text{since } \lim_{h \rightarrow 0} \frac{e^h - 1}{h} = 1 \right]
 \end{aligned}$$

Thus,  $\frac{d}{dx}(e^x) = e^x$ .

**(ii) Derivative of logarithmic function  $f(x) = \log_e x$ .**

If  $f(x) = \log_e x$ , then

$$\begin{aligned}
 f'(x) &= \lim_{\Delta x \rightarrow 0} \frac{\log_e (x + \Delta x) - \log_e x}{\Delta x} \\
 &= \lim_{\Delta x \rightarrow 0} \frac{\log_e \left( 1 + \frac{\Delta x}{x} \right)}{\Delta x} \\
 &= \lim_{\Delta x \rightarrow 0} \frac{1}{x} \frac{\log_e \left( 1 + \frac{\Delta x}{x} \right)}{\frac{\Delta x}{x}} \\
 &= \frac{1}{x} \left[ \text{since } \lim_{h \rightarrow 0} \frac{\log_e (1 + h)}{h} = 1 \right]
 \end{aligned}$$

Thus,  $\frac{d}{dx} \log_e x = \frac{1}{x}$ .

## Foreword

The National Curriculum Framework 2005, recommends that children's life at school must be linked to their life outside the school. This principle marks a departure from the legacy of bookish learning which continues to shape our system and causes a gap between the school, home and community. The syllabi and textbooks developed on the basis of NCF signify an attempt to implement this basic idea. They also attempt to discourage rote learning and the maintenance of sharp boundaries between different subject areas. We hope these measures will take us significantly further in the direction of a child-centred system of education outlined in the National Policy on Education (1986).

The success of this effort depends on the steps that school principals and teachers will take to encourage children to reflect on their own learning and to pursue imaginative activities and questions. We must recognise that, given space, time and freedom, children generate new knowledge by engaging with the information passed on to them by adults. Treating the prescribed textbook as the sole basis of examination is one of the key reasons why other resources and sites of learning are ignored. Inculcating creativity and initiative is possible if we perceive and treat children as participants in learning, not as receivers of a fixed body of knowledge.

These aims imply considerable change in school routines and mode of functioning. Flexibility in the daily time-table is as necessary as rigour in implementing the annual calendar so that the required number of teaching days are actually devoted to teaching. The methods used for teaching and evaluation will also determine how effective this textbook proves for making children's life at school a happy experience, rather than a source of stress or boredom. Syllabus designers have tried to address the problem of curricular burden by restructuring and reorienting knowledge at different stages with greater consideration for child psychology and the time available for teaching. The textbook attempts to enhance this endeavour by giving higher priority and space to opportunities for contemplation and wondering, discussion in small groups, and activities requiring hands-on experience.

NCERT appreciates the hard work done by the textbook development committee responsible for this book. We wish to thank the Chairperson of the advisory group in Science and Mathematics, Professor J.V. Narlikar and the Chief Advisor for this book, Professor P.K. Jain for guiding the work of this committee. Several teachers contributed to the development of this textbook; we are grateful to their principals for making this possible. We are indebted to the institutions and organisations which have generously permitted us to draw upon their resources, material and personnel. As an organisation committed to systemic reform and continuous improvement in the quality of its products, NCERT welcomes comments and suggestions which will enable us to undertake further revision and refinement.

## Rationalisation of Content in the Textbook

In view of the COVID-19 pandemic, it is imperative to reduce content load on students. The National Education Policy 2020, also emphasises reducing the content load and providing opportunities for experiential learning with creative mindset. In this background, the NCERT has undertaken the exercise to rationalise the textbooks across all classes. Learning Outcomes already developed by the NCERT across classes have been taken into consideration in this exercise.

**Contents of the textbooks have been rationalised in view of the following:**

- Overlapping with similar content included in other subject areas in the same class
- Similar content included in the lower or higher class in the same subject
- Difficulty level
- Content, which is easily accessible to students without much interventions from teachers and can be learned by children through self-learning or peer-learning
- Content, which is irrelevant in the present context

**This present edition, is a reformatted version after carrying out the changes given above.**

## Preface

The National Council of Educational Research and Training (NCERT) had constituted 21 Focus Groups on Teaching of various subjects related to School Education, to review the National Curriculum Framework for School Education - 2000 (NCFSE - 2000) in face of new emerging challenges and transformations occurring in the fields of content and pedagogy under the contexts of National and International spectrum of school education. These Focus Groups made general and specific comments in their respective areas. Consequently, based on these reports of Focus Groups, National Curriculum Framework (NCF)-2005 was developed.

NCERT designed the new syllabi and constituted Textbook Development Teams for Classes XI and XII to prepare textbooks in mathematics under the new guidelines and new syllabi. The textbook for Class XI is already in use, which was brought in 2005.

The first draft of the present book (Class XII) was prepared by the team consisting of NCERT faculty, experts and practicing teachers. The draft was refined by the development team in different meetings. This draft of the book was exposed to a group of practicing teachers teaching mathematics at higher secondary stage in different parts of the country, in a review workshop organised by the NCERT at Delhi. The teachers made useful comments and suggestions which were incorporated in the draft textbook. The draft textbook was finalised by an editorial board constituted out of the development team. Finally, the Advisory Group in Science and Mathematics and the Monitoring Committee constituted by the HRD Ministry, Government of India have approved the draft of the textbook.

In the fitness of things, let us cite some of the essential features dominating the textbook. These characteristics have reflections in almost all the chapters. The existing textbook contain 13 main chapters and two appendices. Each Chapter contain the followings:

- Introduction: Highlighting the importance of the topic; connection with earlier studied topics; brief mention about the new concepts to be discussed in the chapter.
- Organisation of chapter into sections comprising one or more concepts/sub concepts.
- Motivating and introducing the concepts/sub concepts. Illustrations have been provided wherever possible.

- Proofs/problem solving involving deductive or inductive reasoning, multiplicity of approaches wherever possible have been inducted.
- Geometric viewing / visualisation of concepts have been emphasised whenever needed.
- Applications of mathematical concepts have also been integrated with allied subjects like science and social sciences.
- Adequate and variety of examples/exercises have been given in each section.
- For refocusing and strengthening the understanding and skill of problem solving and applicabilities, miscellaneous types of examples/exercises have been provided involving two or more sub concepts at a time at the end of the chapter. The scope of challenging problems to talented minority have been reflected conducive to the recommendation as reflected in NCF-2005.
- For more motivational purpose, brief historical background of topics have been provided at the end of the chapter and at the beginning of each chapter relevant quotation and photograph of eminent mathematician who have contributed significantly in the development of the topic undertaken, are also provided.
- Lastly, for direct recapitulation of main concepts, formulas and results, brief summary of the chapter has also been provided.

I am thankful to Professor Krishan Kumar, Director, NCERT who constituted the team and invited me to join this national endeavor for the improvement of mathematics education. He has provided us with an enlightened perspective and a very conducive environment. This made the task of preparing the book much more enjoyable and rewarding. I express my gratitude to Professor J.V. Narlikar, Chairperson of the Advisory Group in Science and Mathematics, for his specific suggestions and advice towards the improvement of the book from time to time. I, also, thank Prof. G. Ravindra, Joint Director, NCERT for his help from time to time.

I express my sincere thanks to Professor Hukum Singh, Chief Coordinator and Head DESM, Dr. V. P. Singh, Coordinator and Professor S. K. Singh Gautam who have been helping for the success of this project academically as well as administratively. Also, I would like to place on records my appreciation and thanks to all the members of the team and the teachers who have been associated with this noble cause in one or the other form.

PAWAN K. JAIN  
Chief Advisor

Textbook Development Committee

## Textbook Development Committee

### CHAIRPERSON, ADVISORY GROUP IN SCIENCE AND MATHEMATICS

J.V. Narlikar, *Emeritus Professor*, Inter-University Centre for Astronomy and Astrophysics (IUCAA), Ganeshkhind, Pune University, Pune

### CHIEF ADVISOR

P.K. Jain, *Professor*, Department of Mathematics, University of Delhi, Delhi

### CHIEF COORDINATOR

Hukum Singh, *Professor and Head*, DESM, NCERT, New Delhi

### MEMBERS

Arun Pal Singh, *Sr. Lecturer*, Department of Mathematics, Dayal Singh College, University of Delhi, Delhi

A.K. Rajput, *Reader*, RIE, Bhopal, M.P.

B.S.P. Raju, *Professor*, RIE Mysore, Karnataka

C.R. Pradeep, *Assistant Professor*, Department of Mathematics, Indian Institute of Science, Bangalore, Karnataka

D.R. Sharma, *P.G.T.*, JNV-Mungeshpur, Delhi

Ram Avtar, *Professor (Retd.) and Consultant*, DESM, NCERT, New Delhi

R.P. Maurya, *Reader*, DESM, NCERT, New Delhi

S.S. Khare, *Pro-Vice-Chancellor*, NEHU, Tura Campus, Meghalaya

S.K.S. Gautam, *Professor*, DESM, NCERT, New Delhi

S.K. Kaushik, *Reader*, Department of Mathematics, Kirori Mal College, University of Delhi, Delhi

Sangeeta Arora, *P.G.T.*, Apeejay School Saket, New Delhi-110017

Shailja Tewari, *P.G.T.*, Kendriya Vidyalaya, Barkakana, Hazaribagh, Jharkhand

Vinayak Bujade, *Lecturer*, Vidarbha Buniyadi Junior College, Sakkardara Chowk, Nagpur, Maharashtra

Sunil Bajaj, *Sr. Specialist*, SCERT, Gurgaon, Haryana

### MEMBER – COORDINATOR

V.P. Singh, *Reader*, DESM, NCERT, New Delhi

## Acknowledgements

The Council gratefully acknowledges the valuable contributions of the following participants of the Textbook Review Workshop: Jagdish Saran, *Professor*, Deptt. of Statistics, University of Delhi; Quddus Khan, *Lecturer*, Shibli National P.G. College Azamgarh (U.P.); P.K. Tewari, *Assistant Commissioner* (Retd.), Kendriya Vidyalaya Sangathan; S.B. Tripathi, *Lecturer*, R.P.V.V. Surajmal Vihar, Delhi; O.N. Singh, *Reader*, RIE, Bhubaneswar, Orissa; Miss Saroj, *Lecturer*, Govt. Girls Senior Secondary School No.1, Roop Nagar, Delhi; P. Bhaskar Kumar, *PGT*, Jawahar Navodaya Vidyalaya, Lepakshi, Anantapur, (A.P.); Mrs. S. Kalpagam, *PGT*, K. V. NAL Campus, Bangalore; Rahul Sofat, *Lecturer*, Air Force Golden Jubilee Institute, Subroto Park, New Delhi; Vandita Kalra, *Lecturer*, Sarvodaya Kanya Vidyalaya, Vikaspuri, District Centre, New Delhi; Janardan Tripathi, *Lecturer*, Govt. R.H.S.S. Aizawl, Mizoram and Ms. Sushma Jaireth, *Reader*, DWS, NCERT, New Delhi.

The Council acknowledges the efforts of Deepak Kapoor, *Incharge*, Computer Station, Sajjad Haider Ansari, Rakesh Kumar and Nargis Islam, *D.T.P. Operators*, Monika Saxena, *Copy Editor* and Abhimanu Mohanty, *Proof Reader*.

The Contribution of APC-Office, administration of DESM and Publication Department is also duly acknowledged.

## PART I

<i>Foreword</i>	<i>iii</i>
<i>Rationalisation of Content in the Textbook</i>	<i>v</i>
<i>Preface</i>	<i>vii</i>
<b>1. Relations and Functions</b>	<b>1</b>
1.1 Introduction	1
1.2 Types of Relations	2
1.3 Types of Functions	7
1.4 Composition of Functions and Invertible Function	12
<b>2. Inverse Trigonometric Functions</b>	<b>18</b>
2.1 Introduction	18
2.2 Basic Concepts	18
2.3 Properties of Inverse Trigonometric Functions	27
<b>3. Matrices</b>	<b>34</b>
3.1 Introduction	34
3.2 Matrix	34
3.3 Types of Matrices	39
3.4 Operations on Matrices	43
3.5 Transpose of a Matrix	61
3.6 Symmetric and Skew Symmetric Matrices	63
3.7 Invertible Matrices	68
<b>4. Determinants</b>	<b>76</b>
4.1 Introduction	76
4.2 Determinant	76
4.3 Area of a Triangle	82
4.4 Minors and Cofactors	84
4.5 Adjoint and Inverse of a Matrix	87
4.6 Applications of Determinants and Matrices	93
